Data Layer available in
Model Repository Java

روابط Results, demands, view & edit حذف شده چون در لایه اپلیکیشن پیاده سازی میشوند

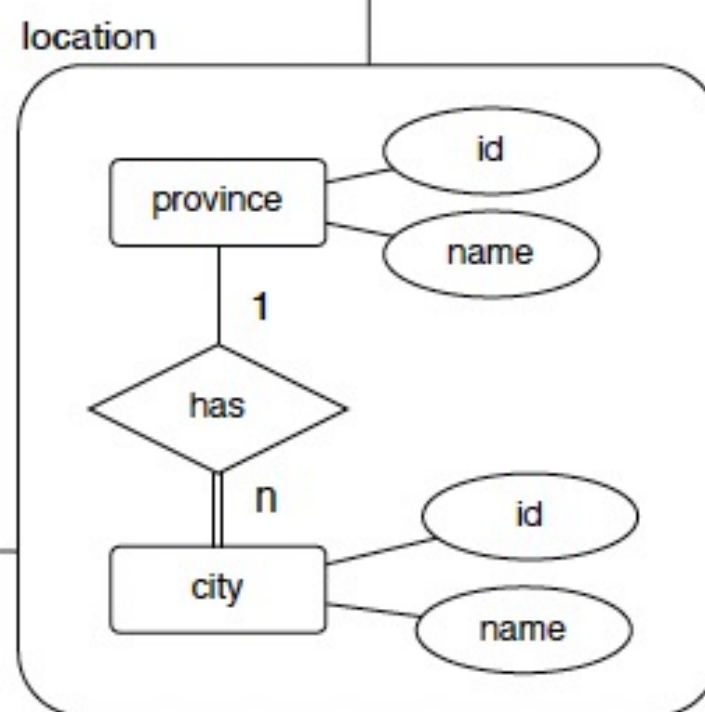

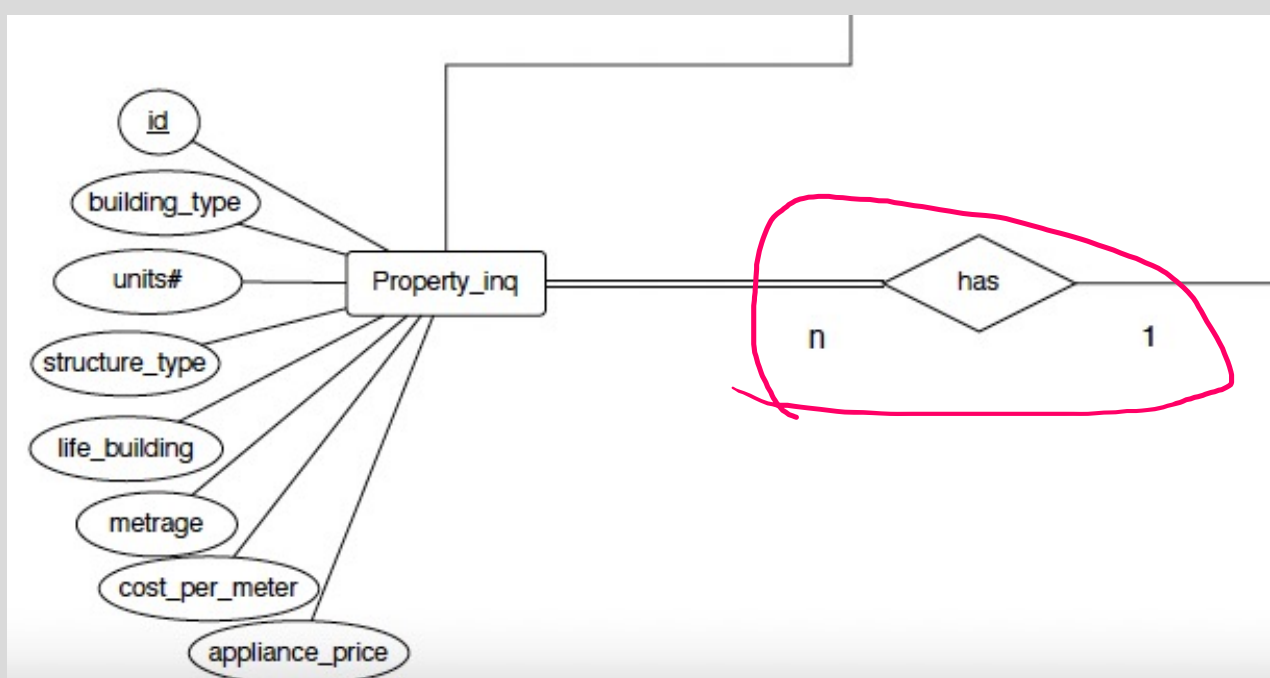

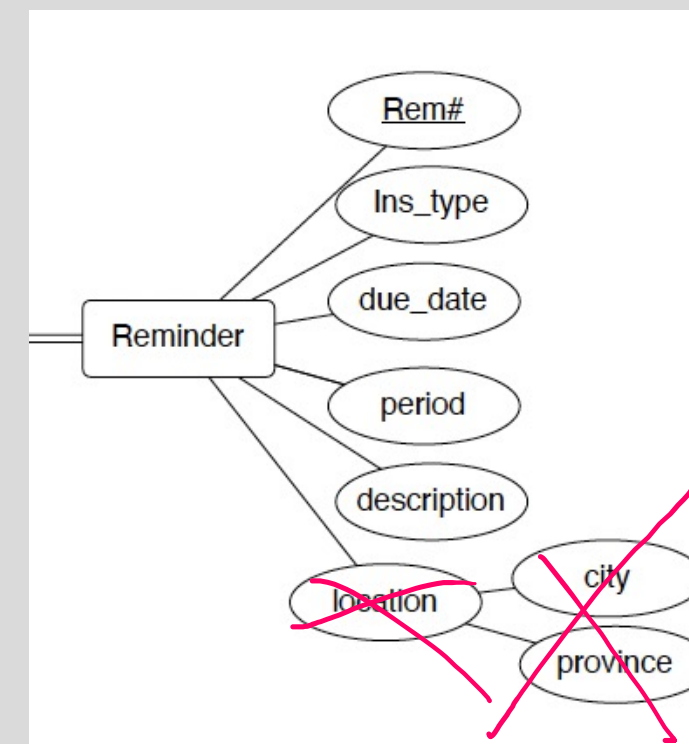

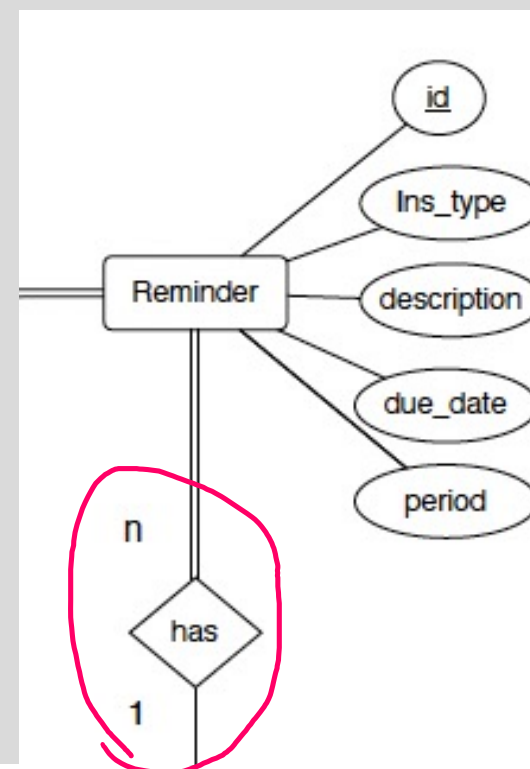

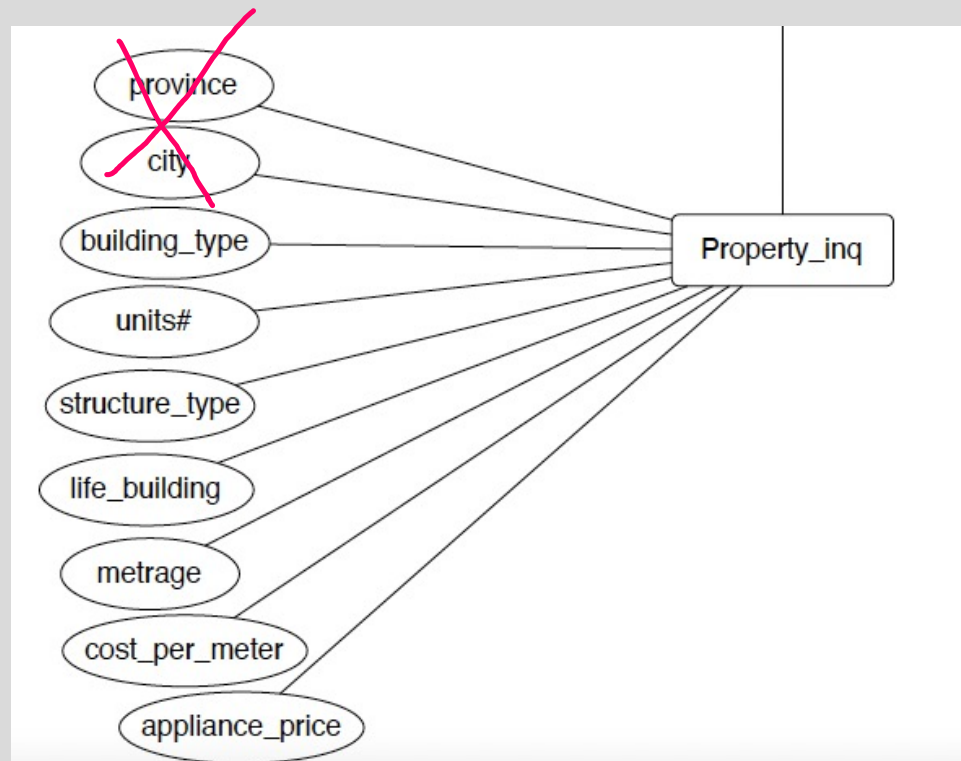

برای inquiry و insurance یک property به اسم type اضافه شده که تایپ درخواست و بیمه را نشان میدهد

یک Entity جدید برای Company ایجاد شده

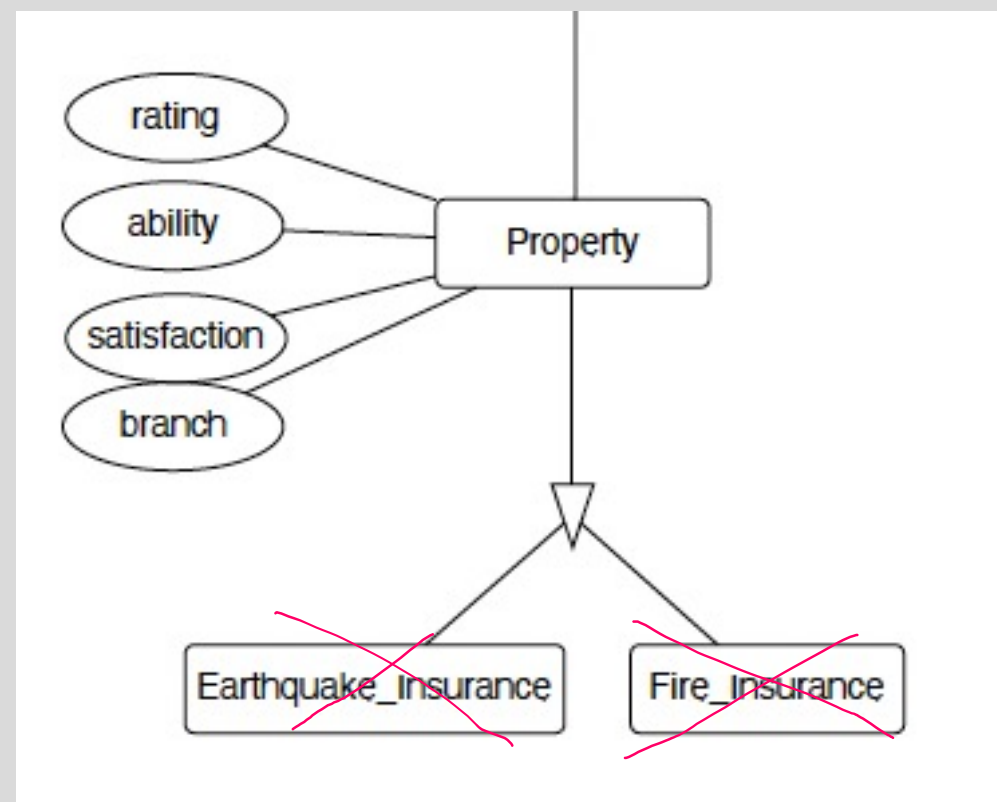

برای Insurance یک property جدید به اسم discount که درصد تخفیف بیمه را نشان میدهد اضافه شده

برای رابطه Bye یک property جدید به اسم final_price که قیمت نهایی اضافه شده

چون هر بیمه قیمت ثابتی دارد که در Insurance هست و بسته به درخواست و اطلاعاتی که کاربر وارد میکند قیمت تغییر میکند ولی در آخر که خریداری میکند قیمت خریداری شده برای آن شخص با آن اطلاعات در final_price ذخیره میشود

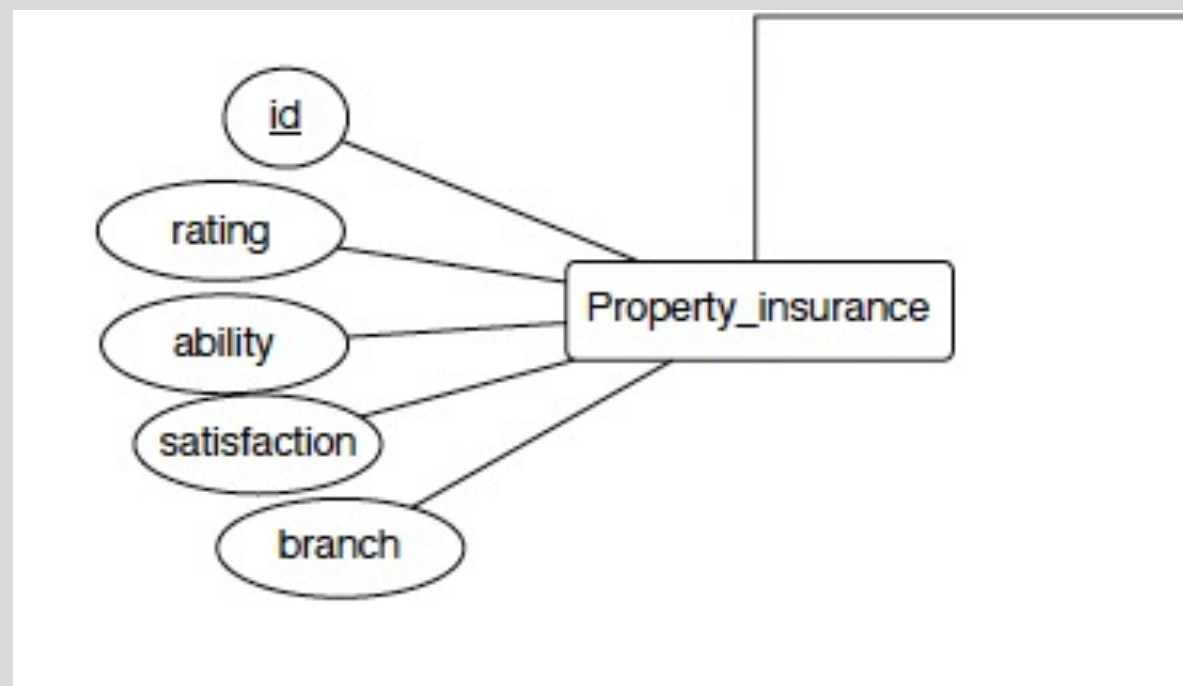

دو Entity جدید برای شهر و استان اضافه شده و در جایی که به آن نیاز بوده از رابطه has استفاده شده

رابطه compare حذف شده چون در لایه اپلیکیشن پیاده سازی میشود

همچنین ۲ انتیتی earthquake_insurance و fire_insurance حذف شده چون با type معلوم میشود و نیازی به ۲ جدول جدید نیست

Part 1 Q 1

Part 1 Q 6 Query

A screenshot of a SQL query editor window. The window has a toolbar at the top with icons for adding, navigating, and deleting. On the left side, there is a blue play button icon. The main area contains a SQL script with 15 lines of code, numbered 1 through 15 on the left margin. The code is color-coded: comments are green, keywords are blue, identifiers are black, and string literals are red. The script declares a variable, prints it, inserts a record into the Insurance table, and then inserts a record into the Health_insurance table.

```
1  -- 6
2  DECLARE @comp_id AS INT = ( SELECT id FROM [Company] WHERE [Company].name = 'Dey');
3  PRINT @comp_id;
4
5  INSERT INTO [Insurance]
6  ( [id], [ins_type], [company_id], [price], [discount])
7  VALUES
8  (251, 2, @comp_id, 150 * 1000, 60);
9  SELECT * FROM [Insurance];
10 INSERT INTO [Health_insurance]
11 ( [id], [ins_id], [ins_service], [child_birth], [chronic_disease], [share_of_costs])
12 VALUES
13 (251, 251, 'shakhs vahed 3 star', 9, 3, 10);
14 SELECT * FROM [Health_insurance];
15 GO
```
